
Table of Contents

Preface	10
Acknowledgments	12
1 GLC — Frontier of Fundamental Science	15
1.1 Project Scope of GLC	16
1.2 Research of Particle Physics	23
1.3 Detector	33
1.4 Accelerator Technology	35
1.5 Conventional Facility	47
1.6 Site — Required Conditions and Candidates	51
1.7 Cost Estimation	55
1.8 Organizational Issues	57
1.9 Impacts and Benefits	60
1.10 Promotion of the Linear Collider GLC - Past and Future	64
2 Physics at GLC	77
2.1 Physics Goals of the GLC experiment	78
2.2 Higgs Physics	80
2.3 Direct Signals of New Physics	88
2.4 Probing New Physics through Top Quark and Gauge Boson Processes	96
2.5 Complementarity of LHC and GLC	99
2.6 Summary	102
3 Detector	107
3.1 General Concept	108
3.2 Vertex Detector (VTX)	111

3.3	Intermediate Tracker (IT)	114
3.4	Central Tracker (CDC)	115
3.5	Calorimeter (CAL)	118
3.6	Muon Detector	121
3.7	Detectors at Interaction Region	122
3.8	Scale of Experiment	125
3.9	Summary	127
4	Accelerator	129
4.1	Introduction	132
4.2	Electron Source	139
4.3	Positron Source	148
4.4	Damping Rings	160
4.5	Bunch Compressor System	169
4.6	Main Linacs: Hardware	176
4.7	Main Linacs: Beam Dynamics	204
4.8	Alignment Control of GLC Beamlines	218
4.9	Beam Delivery Section	221
4.10	Instrumentation	236
4.11	Control System	241
4.12	Operation and Machine Protection	247
4.13	Prospects	247
5	Conventional Facilities	253
5.1	Introduction	255
5.2	Site Layout	256
5.3	Tunnel Layout	259
5.4	AC Power Distribution	266

5.5	Cooling Water and Air Conditioning	269
5.6	Information Network and Safety Systems	273
5.7	Process for Construction	274
6	Site — Required Conditions and Candidates	277
6.1	Overview of the Site Study	278
6.2	Site Selection Criteria	278
6.3	Possible Candidate Sites	285
6.4	Summary and Future Prospects	299
7	Cost	303
7.1	Cost Overview	304
7.2	Accelerator	305
7.3	Conventional Facilities	308
7.4	Cost Summary	309
7.5	Human Resources during Construction	309
7.6	Operating Costs	312
8	Organization	313
8.1	Globalization of the Project	314
8.2	Necessary Features of the Linear Collider Laboratory	315
8.3	Possible Organizational Scheme for the Linear Collider Laboratory	318
8.4	Summary	331
9	Conclusions	333
A	C-band Option for the Main Linac	335
A.1	Introduction	335
A.2	Parameters	336
A.3	C-Band Main Linacs	339

A.4	C+X Hybrid Scheme	350
B	Accelerator Test Facility (ATF)	353
B.1	Outline of ATF at KEK	353
B.2	Emittance Measurements in the Beam Extraction Line	354
B.3	Beam Tuning in the Damping Ring	356
B.4	Future Plans	358
C	Polarized Positron Source	361
D	$\gamma\gamma$ and $e^- \gamma$ Options	365
D.1	Introduction	365
D.2	Overview of $\gamma\gamma$ and $e\gamma$ Colliders	366
D.3	Physics	370
D.4	Technical Issues	372
D.5	Prospects and Plan	375
